

## DigitalCurrencyDaily (\$DCD) on RelayX Run Network.

**DCD** is a *Creator Reward Coin* and is hosted on the BitCoinSV Blockchain using the RelayX Run Network. The token is utilised to purchase premium media options at a discounted rate on [www.digitalcurrencydaily.com](http://www.digitalcurrencydaily.com), as well as allow community members to receive Bitcoin SV airdrops. Interested participants may get DCD on the RelayX Market.

**DigitalCurrencyDaily** is a Blockchain Enthusiast that first discovered BitCoin and its Blockchain technology in early 2011. Joining the space when he was 17, He has spent the last decade exploring a variety of blockchain ecosystems and began creating video content sharing his knowledgeable insights in 2017, from a consumer perspective reviewing cryptocurrency applications, software, interviewing founders and more, while informing others of the value within such technology. Overtime, his efforts led to the creation of an information access point for other crypto enthusiasts to gain insight on how they can utilize blockchain services to obtain cryptocurrency at no cost..

With the main focus of always giving back to his supporters and providing value at no cost, this token will be a Reward Token to those who hold it and support the journey. Users can purchase tokens on RelayX Market, hold the token to support the channel, and help excel the value provided by DigitalCurrencyDaily through sharing media on the platform.

All BSV collected on RelayX for DCD tokens will be held in a Vault wallet and will become redeemable by holders after 1 year of its creation.

Each token will be listed for 0.001 BSV and will allow holders to receive a 10% discount on premium media services. Holders of the token will also receive free Bitcoin BSV airdrops from BSV obtained by DigitalCurrencyDaily utilizing other Bitcoin services. There will be no guarantee of airdrops to token holders, and the size of the airdrops would depend on the amount of BSV that DCD receives from other Bitcoin services. Users should not tie a monetary value to DCD tokens. Tokens are exchanged for BSV to be held in a vault until holder wishes to redeem. Once all tokens are released by DCD, an alternative token price may be determined by a free market on RelayX, however, each DCD will only ever be redeemed by DCD for 0.001 BSV each. If a holder that purchases from DCD transfers his tokens to another individual, they will not be eligible to redeem the BSV held, and the new token holder will be eligible to redeem it, regardless of the price they received DCD for, elsewhere.

### DigitalCurrencyDaily Bitcoin airdrop generation methods

BSV and BitCoin Tokens which are provided in airdrops are obtained from a variety of services in the BitCoin ecosystem, available for everyone to benefit from, include but are not limited to:
